

SELCA: Lung Cancer

Lung cancer is the commonest cause of cancer deaths in the UK. It is notorious for late stage presentation by the time patients notice symptoms and seek medical attention. People living in more deprived areas are more affected. Early diagnosis of lung cancer saves lives with advances in treatment. Let's explore how early diagnosis of lung cancer can be achieved in South-East London and how our shared commitment can make a difference.

This Community of Practice (CoP) offers a unique opportunity for professionals across health, social care, and patients, to explore and reflect on early detection of lung cancer, to understand more about the challenges, and what needs to be done both within the health and care system and how to reach out to the public.

“

Supporting you to develop cross boundary relationships and tap into collective experience and intelligence.
